Storm Surge Flood Zone (Expected Largest Scale)

These areas were designated by the Governor of Aichi Prefecture on June 11, 2021, based on the Flood Control Act. This map shows the maximum storm surge flood zone assuming a storm surge that can occur under the following conditions: the Muroto Typhoon (the largest in history, 1934) class passes through a route that maximizes the tide level deviation at high tide at 73 km/h (Speed of Ise Bay Typhoon) while maintaining the atmospheric pressure (910 hPa) when it landed. This map assumes the worst-case scenario, such as river flooding and levee breach due to storm surges.

***Landslide Damage Danger Zone**
Area with steep slope that when destroyed by disaster may endanger the health and lives of the residents

***Landslide Damage Special Danger Zone**
Areas in the Landslide Damage Danger Zone in which damaged structures may significantly endanger the health and lives of the residents.

***Emergency Transport Road**
These roads are important as they are used immediately after a disaster to ensure the smooth implementation of rescue operations and the transportation of goods. Use of these roads may be restricted in the event of a major disaster.

***Support Station for Individuals Returning Home on Foot**
Entities that entered into an "agreement related to the support of individuals coming home on foot during disaster" with Aichi, and which in the event transportation becomes unreliable, offer water, restroom facilities and road information to individuals coming home on foot. Stickers have been submitted for stores that can offer support. (There may be cases in which stores are closed and services not provided.)
